CHOSEN SEGMENT: Casual Users Concerned About Voice Quality

Key Characteristics:

- Active ChatGPT users, primarily text-based
- Use GPT for Quick queries, brainstorming & info seekers
- Hesitant mobile voice users

Behavioural Traits:

- Default to typing despite voice option
- Abandon voice after first experience
- Cite quality as primary blocker

Psychological Drivers:

- Distrust voice-to-text accuracy
- Fear robotic AI voice responses
- Worry about being misunderstood

IMPACT JUSTIFICATION

#1

Largest untapped segment in ChatGPT Mobile India

71%

Would switch to voice if quality improves

HIGH

Frequency of use - small trust shift = big engagement

Solving this segment unlocks voice adaption at scale

INSIGHTS FROM USER RESEARCH

SURVEY RESULTS

(31 survey responses) Survey Result

(H1) 55% cite public discomfort as #1 blocker

48% tried once and then stopped

(H2 & H5) 29% have privacy concerns & lag issue

(H4) 15% have agentic issues & robotic AI voice

71% would switch if quality improved

(H3) 4.6/7 avg. voice accuracy rating (mediocre)

1:1 INTERVIEW

(3 interview responses)

01. Social Anxiety is Universal

All respondents hesitate to use voice in public — fear of being overheard drives avoidance

02. Trust in Accuracy is Broken

Average trust score just 4.3/10 — users feel ChatGPT mishears more than Gemini or Google Assistant

03. Privacy is Hard Deal Breaker

2 of 3 users cited data security as must-fix — especially for sensitive professional conversations

04. Whisper Mode is a Desired Feature

Users want to use voice in public at low volume — a specific product gap vs. competitors

05. Benchmark - JARVIS & Wakeword

Users compare to Gemini, Google Assistant — want smart, conversational voice with a wake word

HYPOTHESIS FRAMEWORK

Why are casual ChatGPT mobile users not using the voice feature?

- H1 — Social Discomfort Users
- H2 — Privacy & Data Concerns Users
- H3 — Poor Accuracy & Accent Recognition Users
- H4 — Robotic & Unnatural AI Voice Users
- H5 — Speed & Efficiency Users
- H6 — Discoverability Users

🔑 **KEY SYNTHESIS:** Social anxiety + broken trust + privacy fears = users avoid voice entirely. Fix all three to unlock adoption.

PROBLEM FRAMING CANVAS

Defining the core problem to solve in Milestone 3

PROBLEM STATEMENT:

Casual ChatGPT mobile users in India avoid the voice feature due to social anxiety, broken trust in accuracy, and privacy fears — despite 71% willingness to switch if these barriers are removed.

WHO ARE WE SOLVING FOR?

TARGET SEGMENT

Casual Mobile Users - INDIA

- Active ChatGPT users on mobile
- Students, professionals & casual learners
- Quick queries, brainstorming & info seekers
- Hesitant voice adopters — default to typing

WHAT IMPACT DOES SOLVING THIS CREATE?

DESIRED OUTCOME

Unlock Voice Adaption at Scale

- Increase daily voice feature usage among casual users
- Reduce first-interaction drop-off rate (currently 48%)
- Build long-term trust in voice accuracy & privacy
- Drive recurring engagement through habit formation

WHAT IS THE CORE PROBLEM?

ROOT CAUSE

03 Compounding Barriers

- 55% avoid voice due to social discomfort in public
- Trust in accuracy is broken — avg 4.3/10
- Privacy fears deter use in sensitive contexts
- 48% abandon voice after just one experience

WHY SOLVE THIS NOW?

NOW FACTOR

Urgency is HIGH

- Gemini & Google Assistant already lead on voice UX
- India is ChatGPT's fastest growing mobile market
- Voice adoption is stalling despite platform growth
- Early trust wins = long-term loyalty & engagement
